

Passivhaus Days 2008 Austria

More than 6.000 visitors in 158 Passivhaus buildings in Austria!

The 5. International Passivhaus Days on 7-9th November 2008 in Austria have been a well opportunity for the public to inform themselves, how living in a Passivhaus is in daily life. In many opened buildings architects and planners are organising guided excursion tours, explaining how a Passivhaus works and why it need such less energy compared to a conventional building. The number of visitors is raising every year, beside interested person from the regions also visitors from France, Sweden, Denmark, Germany, Poland, Estonia, Rumania, Czech Republic, Slovakia, Slovenia, Croatia, Italy and Switzerland visited Passivhaus buildings in Austria.

Many residents of Passivhaus buildings talked about their daily life and the way of living comfort. A family, living in a retrofitted multi storage Passivhaus in the City Linz explained, that as they are living on a main road before the renovation the had to clean the dust every day, as the mother is an allergic person. After the renovation they have to clean the dust only once a week and there is no more need for medical treatment of the allergy.

Many visitors are using the International Passivhaus Days to clear their decision, whether the will build their new house in Passivhaus standard or not.

Visitors informing themself about living in a Passivhaus
